

Camera fleet health, compliance, and proof.

MentatNOC is a monitoring platform for physical security camera fleets. It continuously watches the health of every camera across every site, catches the quiet failures that cause outages and recording gaps, and keeps the records that prove the system was working. The platform monitors device health, never footage.

WHAT THE PLATFORM TRACKS

- Reachability and verified image production for every camera, continuously
- Certificate expiry, firmware state, and time sync, alerted well before they bite
- Tamper events, captured and preserved as evidence
- Planned maintenance marked so it never pages anyone; real failures become tickets with diagnostic context attached

PROOF, NOT JUST ALERTS

Every health signal and every action lands in a tamper-evident, hash-chained record. When an auditor, a compliance framework, or an insurer asks whether the camera system was working and who touched it, the answer is a report, not a scramble. MentatNOC is pursuing SOC 2 attestation; reports will be published when issued.

SUPPORTED MANUFACTURERS

Deep device support for Axis, Bosch, and Hanwha. Camera manufacturers can request platform support.

WORKING WITH MENTATNOC

MentatNOC sells direct and works closely with security integrators. An optional NOC service adds around-the-clock monitoring and alert triage on top of the platform. The partner program is open to integrators, distributors, and MSSPs.
