

GSM Network Services

KORE DELIVERS...

- Worldwide GSM network services:
 - GPRS
 - EDGE
 - HSPA
- Coverage on the largest, most reliable GSM network alliance available
- Carrier grade infrastructure, completely redundant and geographically dispersed service centers
- Simple, easy and fast set up process
- Automated device activation interfaces and APIs
- Protection against excessive device usage
- Voice, fixed IP and messaging options

KORE Telematics powers GSM applications with coverage across all of North America and globally. With the industry's first usage-based pooled and packaged service plans – and smooth managed roaming – KORE GSM network service is provided over the world's most reliable global network alliance.

The first to provide 24/7 real-time management, KORE introduced the second generation business management portal, PRiSMPro™. KORE delivers the most cost effective, most configurable and most manageable GSM service available. Over 600 solution partners, in fields as diverse as security, utilities, healthcare and fleet management, rely on KORE to enable their M2M solutions. Everyday more ASPs, Enterprises, Integrators and Government Agencies rely on KORE as a one-stop shop for both GSM and CDMA wireless data services.

M2M Wireless Networks,
It's All We Do!

About KORE Telematics

KORE Telematics is the world's largest fully digital wireless network provider focused exclusively on the rapidly expanding machine-to-machine (M2M) communications market. By maintaining long-term, direct relationships with Tier 1 wireless operator partners, KORE offers a range of technologies (GSM and CDMA), ensuring the greatest possible reliability and coverage.

With an extensive network of application and hardware partners, KORE enables complete solutions for vehicle tracking, homeland security, automated metering and dozens of other M2M applications.

KORE services are powered by fully redundant, geographically dispersed, network service centers – specifically engineered for the business-class needs of M2M applications. KORE partners manage their devices through the innovative KORE PRiSMPro Business Management platform, with full control of all aspects of online management, via secure web portal or business-class API.

- Real-time activation
- Active usage monitoring
- Threshold management
- Extensive reporting capabilities
- Integration toolkits

Who benefits from KORE Services?

A growing number of companies benefit from KORE Telematics services every day. KORE services deliver solutions for applications as diverse as:

- Residential and Commercial Security
- Automated Vehicle Location (AVL) and Tracking
- Law Enforcement Tracking and Surveillance
- Local, Regional and Long-haul Fleet Management
- Personal and Pet Location and Tracking
- Remote Asset Management (Fixed & Mobile)
- Telemetry, Sensory and Monitoring Systems
- Advanced Meter Infrastructure (AMI)

Applications currently running on the KORE network range from low data (less than 100 KB monthly) to high throughput (50 MB and beyond) advanced applications. Both fixed and mobile solutions are delivered using GSM GPRS, EDGE and HSPA, or any combination of GSM and CDMA for hybrid and international solutions.

What are the major benefits of GSM network services from KORE?

KORE Telematics is your partner in delivering M2M solutions that minimize Total Cost of Ownership over the life cycle of your application. KORE invested in all the 'extras' necessary for a flexible and reliable 24/7 M2M network service to power your application so you can design, develop and launch the best M2M solutions quickly, cost effectively and with the highest confidence.

Adding voice for enhanced service

Many M2M applications can be enhanced with occasional use voice capability, such as residential alarms, ambulance telematics or offender control. KORE voice services were developed with these needs in mind — cost effectively delivering secure one-way or dialable two-way options that save you money. You pay only for what you use — and the services are free of tax or regulatory charges.

Our Feature	Benefit
KORE GSM GPRS, EDGE and HSPA services, across all of North America and globally with smooth, managed roaming.	Consistent, predictable tariffs anywhere in the world - fixed or mobile - with Tier 1 partners, and service in over 145 countries.
KORE suite of pooled (aggregated multi-device) and packaged (per MB) billing plans, enhanced with 1KB rounding.	The lowest possible costs for data usage on a monthly basis, consistently — further enhanced by the lowest rounding factor in the industry.
KORE PRISMPro network and performance management platform — with secure online/web access and business-class API — provides direct provisioning, alarming, monitoring and control.	Staffing and time costs associated with device activations and management greatly reduced through a comprehensive suite of real-time capabilities, tools and reports. Business-class API supports automated and high volume needs.
6 years of GSM service delivery experience from the largest buyer of GSM capacity in the M2M market.	More knowledge, faster fixes more specialized service capability and more attractive services options
KORE PRISMPro threshold monitoring and management capabilities.	Real costs related to unmanaged or defective devices, or unanticipated application issues — that can spike data usage unexpectedly high — are all but eliminated.
KORE is 100% M2M network services focused. No applications, no distractions.	KORE is your partner, not your competition — we support your you and your M2M applications. KORE brings total commitment of all staff to meet your needs.
KORE proven network availability and reliability.	Maximum availability — exceeding industry standards — maximizes your application.
KORE team support for rapid 'on-boarding' (application, validation, certification and commercial deployment)	Streamlined process and dedicated support ensures fastest time-to-market and the fastest time-to-revenue, while minimizing your resources and costs.
KORE GSM and CDMA services offerings available under a single commercial agreement — GSM GPRS, EDGE and HSPA, CDMA 1xRTT and EV-DO.	Eliminates time and effort to negotiate and manage multiple services agreements — cost savings with combined volume discounts — efficiencies from single point-of-contact for support and troubleshooting — speeds development & deployment of mixed, hybrid and international solutions—with one bill for all services.
