

MindTree Mobile Testing Services

May 2011

Mobile Testing - Our Key offerings

- Provides the end to end testing services for handsets, M2M devices, tablets
- Expertise on various platforms
- Fully equipped lab infrastructure to perform protocol, application, feature testing

Device Testing

Application Testing

Pre-certification Testing

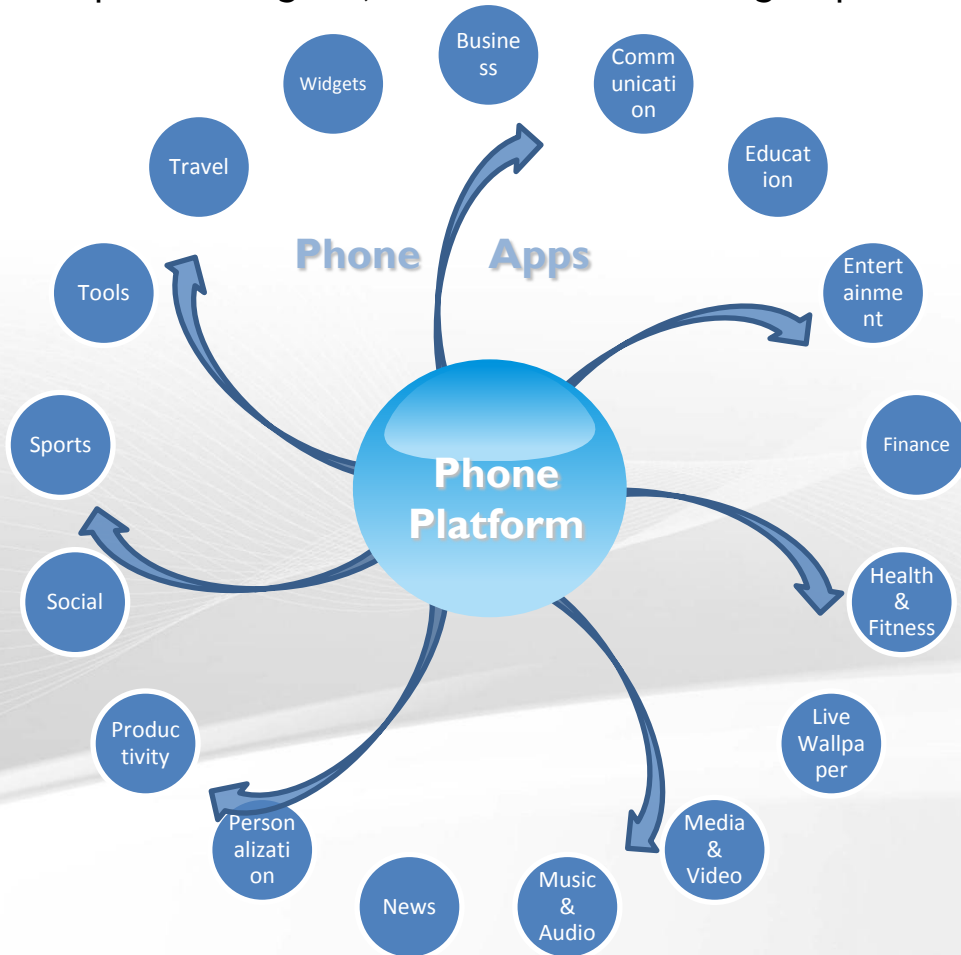

- Functional Testing
- Interactions and interruptions scenarios
- Usability Testing
- Network & Security Testing
- Performance testing

- Pre-certification testing as specified by
 - Certification bodies
 - Carriers
 - Customer requirements

MindTree experience in Phone Apps

- MindTree possess extensive experience in end to end testing of mobile phones. As part of the MindTree Phone Development Program, we have built strong expertise in testing Mobile Applications.

Key Highlights of our Mobile Application Testing Experience

- Tested and validated of 100+ phone targets for 50+ carriers including the Usability aspects of the phone
- Extensive validation of Mobile Applications built for MindTree In-house Android based Mobile Phone
- Have tested applications on various platforms - Android, BMP, Blackberry, iPhone, Windows etc for customers like TomTom, SMA Solar, Time Inc, P&G, Unilever etc.
- Test bank of 25000+ test cases for various Mobile applications
- Strong expertise in test design techniques supported by thorough processes and tools to manage test execution and reporting
- Tested phones for various technologies - GSM, 3G, CDMA. Test infrastructure to support these technologies

As part of the MindTree Phone Development Program, we have strong experience of GUI and Application testing on Android platforms. Below are the applications which were covered as part of testing

- Social networking, Camera, Camcorder, Media Gallery, Video Streaming, Music Player, Video Player, DRM, HTTP Downloads, OMA Downloads, Compass, Maps, SMS, MMS, Internet Tethering, Email, TTY, VPN, Wi-Fi, Browser, GPS, Notebook, Quick office, Tunewiki, Settings, Alarm, Ambient Light Sensor, Proximity Sensor, Backlight, Accelerometer, Airplane mode, Calculator, Calendar, Mass Storage, Contacts, Home screen, Touch screen, Vibrator, Calling, Image Editor, Split screen

We have been involved in delivering 50+ Kyocera phone roadmaps for various carriers across the globe, and below are the applications that were tested on BREW platform

- Phone Book, Phone features, Interaction and Behavior, Interrupt and alert Functions, Digit Alpha Entry, Calling & Call History, Settings, Service menu, Position, location & Service Programming, Camera, Camcorder, Media Gallery, Video Streaming, Music Player, Video Player, DRM, HTTP Downloads, OMA Downloads, SMS, MMS, Email, TTY, Wi-Fi, Browser, GPS, Settings, Alarm, Backlight, Airplane mode, Calculator, Calendar, Mass Storage, Contacts, Home screen, Touch screen, Vibrator, Calling

Snapshot of Key Customer Case Studies

Case Study 1 - Application Testing

- TuneWiki for Android is a social media player that shows subtitled lyrics as you listen to your favorite music, watch music videos, or stream songs. TuneWiki provides lyrics for over 3 million songs, translated into over 40 languages.

As part of the MindTree Phone Development Program, TuneWiki Application was tested for the following

- Launching and exiting the application
- Validating Artists
- Validating Albums
- Validating Playlists
- Streaming audio and video
- Sync
- Interruption
- Validating different audio codecs
- Streaming
- Performance

Testing of Tune Wiki - Social media player Android Smartphone

Case Study 2 - Application Testing

- Quickoffice® is an application suite for Android smartphones that can be used to CREATE, VIEW, and EDIT, Microsoft® Office files including Word documents, Excel spreadsheets, and PowerPoint presentations.

As part of the MindTree Phone Development Program, Quickoffice Application was tested for the following

- Create, open, & edit PowerPoint® Files (.ppt & .pptx)
- Clipboard access (cut/copy/paste) in app and between apps
- Insert and resize images from gallery or camera
- Edit and format table text in documents
- Undo / redo user actions
- Thumbnail preview scrolling for multi-page documents
- Paragraph alignment in documents
- Edit speaker notes in presentations
- Share files from via e-mail, SMS, Bluetooth, and others
- Add, delete, and rename worksheets in Excel files
- Apply formulas to multiple cells by tapping and dragging
- Move & resize text boxes, images, and shapes

VZW tones (Real Networks, Reston) About VZW tones

BACKGROUND	CHALLENGES
<ul style="list-style-type: none"> Verify tones Delux 3.5 application enables Verizon to manage content from a rich library of content providers and provide packaged solutions (content, branded user interfaces and delivery flexibility) to their subscribers (primarily via mobile phone users) Verify tones Delux 3.5 application is designed to create and deliver an industry leading entertainment experience to end user. Desired result is a compelling, easy to use, fun, time and Ring back tones discovery, purchase and playback experience. 	<ul style="list-style-type: none"> Verify the VZW tone application on different mobile phones with minimum amount time Devices would be available only for about a week for certification All the devices to go through HSTL certification for application compatibility Over 9000 test scenarios to be executed Spiked schedules Defect free in parallel to testing, increased regression cycle
SOLUTION	BUSINESS IMPACT
<ul style="list-style-type: none"> Hybrid / on demand model (on-site / off-site) Virtualization testing using Test Quest tool Selective testing instead of targeting and to end testing on the actual devices Extensive use of Simulators and emulators during development cycle Controlled device access to facilitate testing and defect free verification 	<ul style="list-style-type: none"> Reduced time to market due to continuous testing and optimization of test case Reduced cost due to testing conducted by offshore team on the actual device Early detection of defects Standard processes and templates with uniform understanding

Case Study 5 - Testing of Apple and Android based Mobile Apps

BACKGROUND	CHALLENGES	SOLUTION	BENEFITS TO CUSTOMER
<ul style="list-style-type: none"> Time Inc., a Time Warner company, is one of the largest content companies in the world. Since April 2010, Customer is developing a commerce gateway for the user management and/or for some sporting mobile and existing web interfaces. Along with this they want to launch a couple of mobile apps in the Apple iOS and Google Android platform. Mindtree team had done a commendable job during the earlier commerce project and they wanted to leverage our e-commerce expertise in to the iOS and next app testing 	<ul style="list-style-type: none"> iOS and Android APP was an alien world for the e-com team, totally different from what they have done during the e-commerce testing As UI wireframes were kept on changing for iPhone/iPad and Android platforms and there was lot of re-design the work of test cases involved and we need to follow up for confirmation of changes There were build issues while executing on the simulators and also dependencies on Thirdparty for the Certification to be made it work for simulators/emulators we test out on others. 	<ul style="list-style-type: none"> Mindtree ramped up the offshore team that was part of the e-commerce application testing for testing of mobile applications with the help of Apple Application Testing S4E The team learnt the apps (Time, People, Life Wall Paper, Sports Illustrated, Real Simple) in no time, evaluated the test tools to be used to set up an environment at offshore (iPhone, iPad, Android & BlackBerry emulators, device Anywhere) and hooked to customer system. The team also created new templates for test cases, wrote test cases and finally executed the test cases within the committed schedule. Team Size - 5, No of Test Cases - 3000+, Project Duration - Apr 2010 till date 	<ul style="list-style-type: none"> The application was launched on time and with excellent quality. The Apple Android APP was one of the featured APPS in the Android market with a user experience survey rating of 5 out of 5 (perfect) Despite of communication challenges and lack of clarity on the requirements, Mindtree team is able to coordinate with 800 call center vendors (in Tringga) who work in a different Time Zone and are able to deliver the applications on time.

Testing of Apple and Android based Mobile Apps

Case Study 3 - Mobile Website Testing for P&G products

Background	Solution
<ul style="list-style-type: none"> P&G is a CPG company & not a Retail company. It's market capitalization is now \$150 billion, making P&G one of the 10 most valuable companies in the United States. P&G wanted to have mobile websites across different resolutions which are part of Top Ten mobile list from http://metrics.admob.com/2009/10/complete-mobile-100-mobile-apps-2009/ Victor of this project was to deliver big free website which renders on phones with different resolutions. 	<ul style="list-style-type: none"> In P&G there were no projects in mobile space. Initially a PoC was done to showcase our ability to the customer. Customer was happy with our capabilities which helped us to win the business. PHP code was developed for mobile websites to rendered properly on phones. 3 member team completed the development and testing in 2 weeks for High, Medium and Small resolutions.
Challenges	Business Impact
<ul style="list-style-type: none"> There was major challenge to fit the content and images in lower resolution phones which are of 128 pixels (Nokia6230) and testing the same on the phone took lot of time due to the slow internet connection on phones. For High resolution phones like iPhone and Android based phones we used SM cards initially for connectivity which increased the testing time due to slow connectivity issues. This was mitigated later by using Wi-Fi Access point for faster connectivity. 	<ul style="list-style-type: none"> Enabled the Customer to meet time to market without compromising on Quality P&G has expressed its confidence in Mind Tree by giving more projects

Mobile Website Testing for a Leading FMCG Company

Guidelines and Execution Model for Usability Certification

Usability Testing - Key Parameters to verify

Usability Testing of Mobile Applications

Compatibility/Interfacing

- Compatibility with device, OS versions
- Interfacing with the other applications

Performance

- Time taken to complete the tasks
- Number of steps required to complete a basic task
- Eg: Time taken to load the application, exit the application, transition from one screen to another etc

Interruptions

- Interruptions that occur while being on the application

Stress

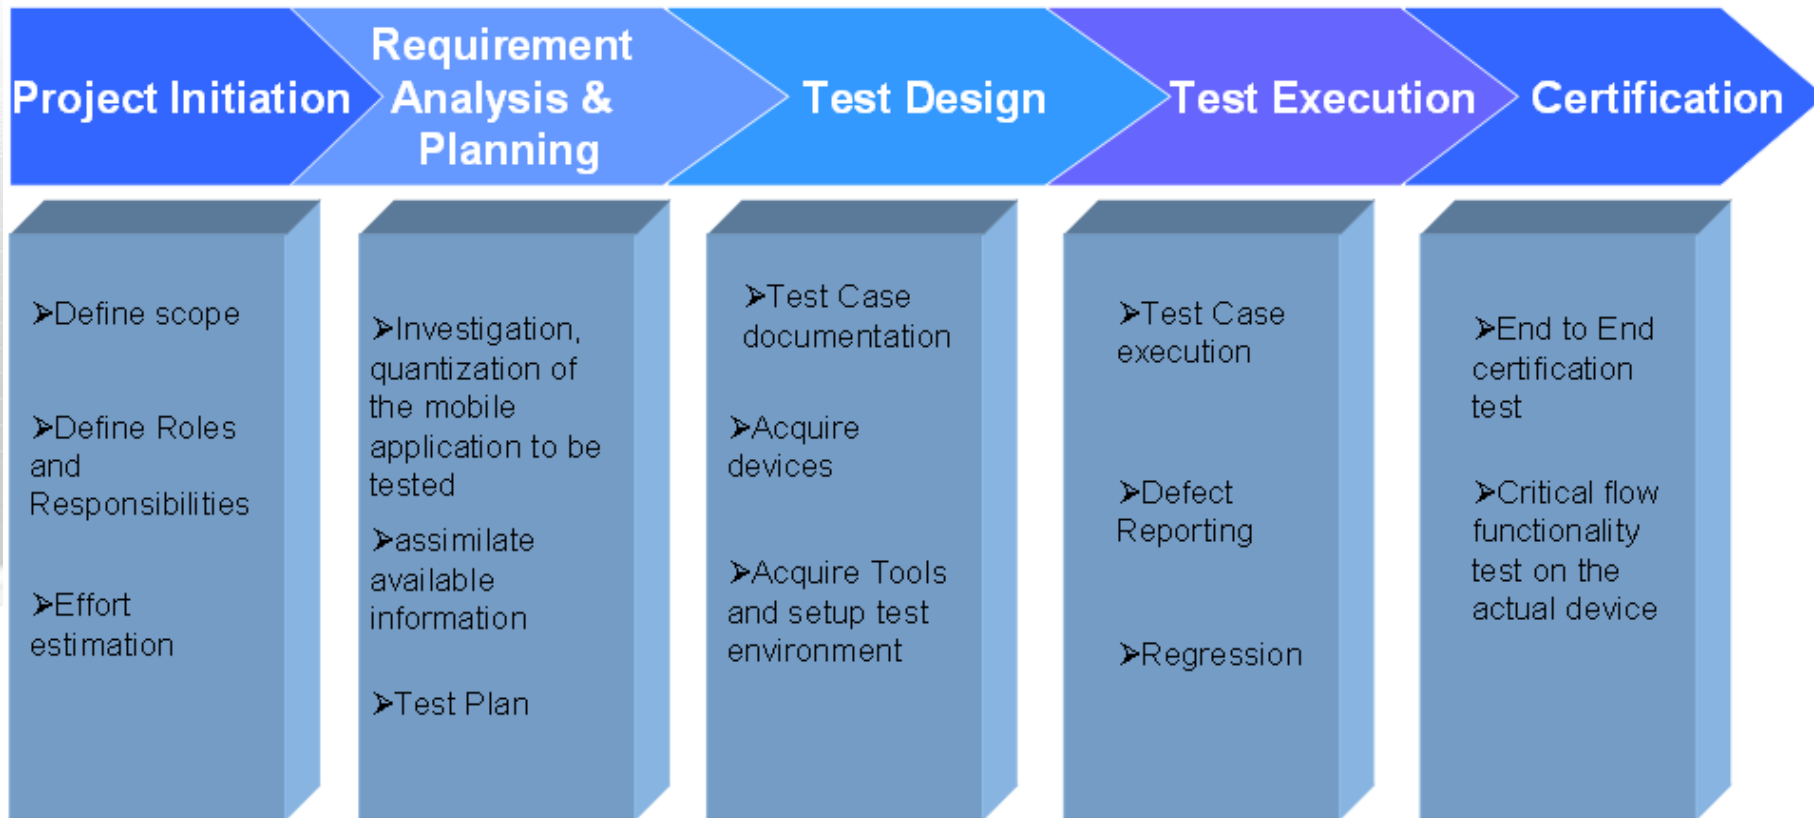

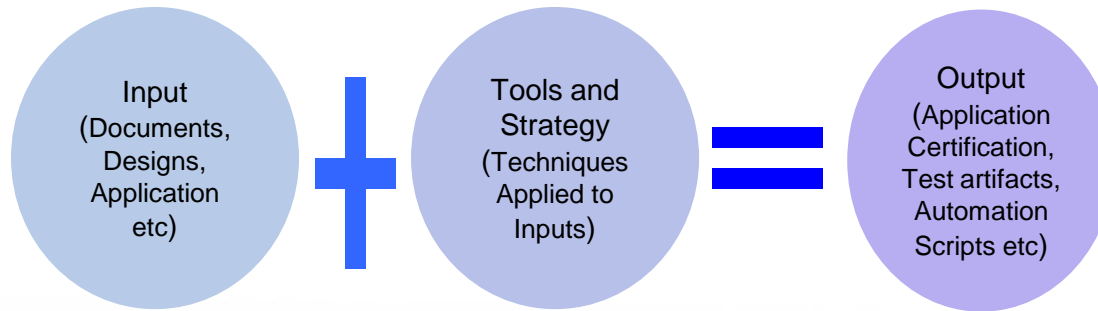

- Ease of use when the application is really stressed to maximum usage scenarios

Typical categories for Certification

Installation	Un-installation	Web Service	File and Data management
Networking support	Version control of the binaries	Digitally signing the binaries	Digitally signing the drivers
User access and control	Privacy guidelines	Security	Reliability
Power Management	UI	Performance	Accessibility

Proposed Test Methodology

Project Execution Models

Name	Onsite	Offshore	Coverage of Devices *	Comments
Onsite	Complete	NA	100%	Prohibitive Costs
Offshore	NA	Complete	95%	Dependency on availability of Devices and Test Environment
Hybrid	Part onsite	90% offshore	100%	Initial execution strategy with no major issues encountered
On Demand	Part Onsite + Short term Travel	Majority offshore	100%	Benefits of above + scaling benefits

* All Devices and Tools required for the testing provided by the customer

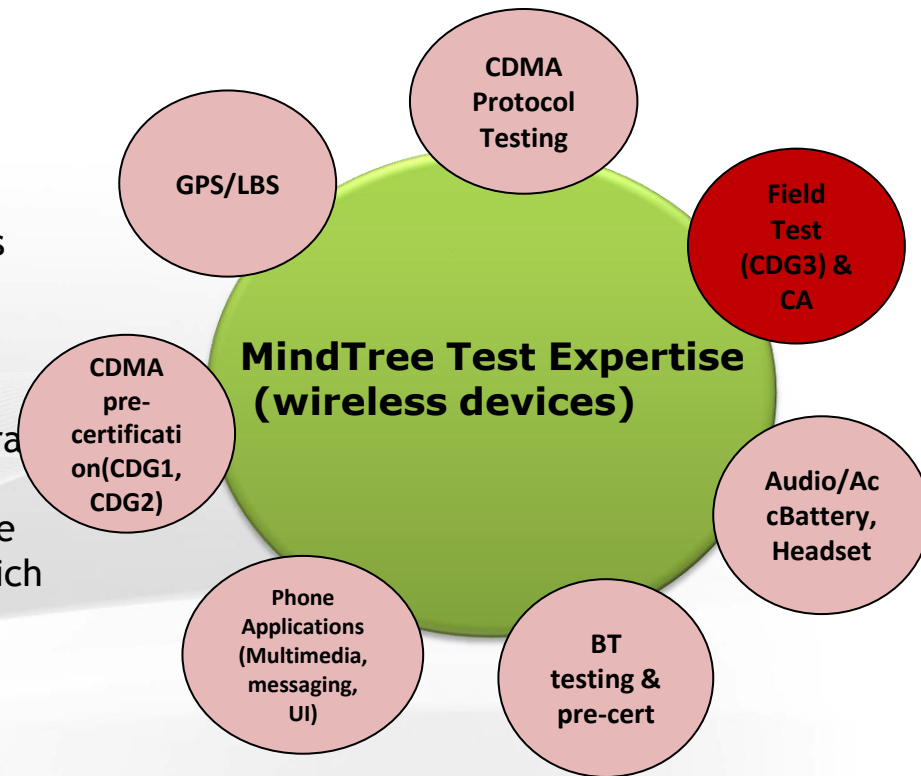

Appendix - Overview of Telecom Testing Capabilities

Overview on our experience in the Mobile Testing

- MindTree possess extensive experience in end to end testing of mobile phones including testing Applications on BREW and Android platforms, field test and customer acceptance.
- Experienced pool of Engineers, Senior Engineers, Technical Specialists on end to end product testing with profound experience in understanding of tools and test setups across CDMA, EVDO, GSM, 3G, LTE, Wi-Fi, GPS and BT technologies
- Our Phone Test team has worked along with Kyocera Wireless Corporation (KWC) in delivering the 50+ Kyocera phone roadmaps various carriers across the globe. The team was also part of the 3G phone which was developed by MindTree.
- We have a fully equipped lab for CDMA, GSM and WCDMA phone development and testing. Refer the embedded document that captures details of our phone testing experience

Appendix - Mobile App Testing Case Studies

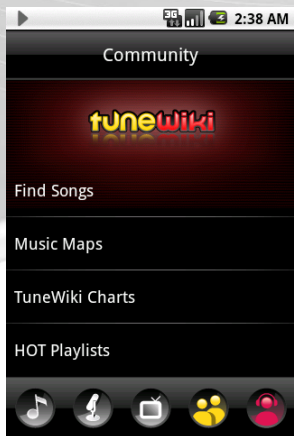

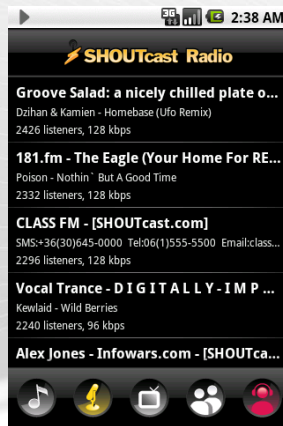

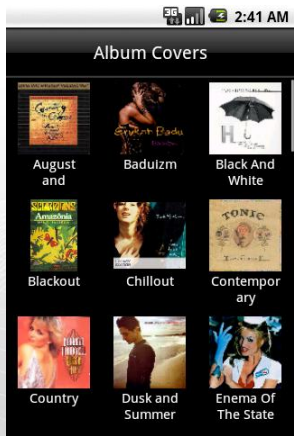

Case Study 1 - Application Testing

- TuneWiki for Android is a social media player that shows subtitled lyrics as you listen to your favorite music, watch music videos, or stream songs. TuneWiki provides lyrics for over 3 million songs, translated into over 40 languages.

As part of the MindTree Phone Development Program, TuneWiki Application was tested for the following

- Download operation & Upgrade under varied memory conditions
- Usability testing by accessing songs through different options available
- Functionality
- Sync
- Interruptions
- Validating different audio & Video codecs
- Streaming Video & Audio
- Performance

Case Study 2 - Application Testing

- Quickoffice® is an application suite for Android smartphones that can be used to CREATE, VIEW, and EDIT, Microsoft® Office files including Word documents, Excel spreadsheets, and PowerPoint presentations.

ANDROID

As part of the MindTree Phone Development Program, Quickoffice Application was tested for the following

- Create, open, & edit all Microsoft office files
- Clipboard access (cut/copy/paste in app and between apps)
- Performing Search operation on keywords with different sized files
- Insert and resize images from gallery or camera
- Edit and format table text in documents
- Undo / redo user actions
- Thumbnail preview scrolling for multi-page documents
- Paragraph alignment in documents
- Share files from via e-mail, SMS, Bluetooth, and others
- Add, delete, and rename worksheets in Excel files
- Apply formulas to multiple cells by tapping and dragging
- Move & resize text boxes, images, and shapes

Case Study 3 - Mobile Website Testing for P&G products

Background

- P&G is a CPG company with a market capitalization of about ~\$150 billion, making P&G one of the 10 most valuable companies in the United States.
- P&G wanted to have mobile websites across different resolutions which are part of Top Ten mobiles list from
 - <http://metrics.admob.com/2009/10/september-2009-mobile-metrics-report/>
- Vision of this project was to deliver bug free website which renders on phones with different resolutions.

Solution

- In P&G there were no projects in mobile space. Initially a PoC was done to showcase our ability to the customer. Customer was happy with our capabilities which helped us to win the business.
- PHP code was developed for mobile websites to rendered properly on phones.
- 3 member team completed the development and testing in 2 weeks for High, Medium and Small resolutions.

Challenges

- There was major challenge to fit the content and images in Lower resolution phones which are of 128 pixels (Nokia6230) and testing the same on the phone took lot of time due to the slow internet connection on phones.
- For High resolution phones like I-phone and Android based phones we used SIM cards initially for connectivity which increased the testing time due to slow connectivity issues. This was mitigated later by using Wi-Fi Access point for faster connectivity.

Business impact

- Enabled the Customer to meet time to market without compromising on Quality
- P&G has expressed its confidence in Mind Tree by giving 4 more projects

1. Background

- Yahoo! is the leading global brand that creates deeply personal digital experiences using technology, insights based on data, and intuition to bring together personally relevant content and experiences from across the Web. It provides its consumers across the globe simple, trusted ways to connect with the people, communities, topics, and trends that matter to them most.

2. Scope

- Yahoo! Cricket for Mobile: Get the schedule before the match, live scoring during, and the results as they happen. View the score summary, headline news, photos and trivia—all from one page
- View player photos and in-depth stats; plus read interviews about current action
- Browse photo albums of matches, players and special events
- Get details of ongoing series with a micro-site designed just for that series
- Get scores auto-refreshed for live matches (available on select devices)

3. Solution

- Review Requirements
- Create and execute test cases
- Defect Analysis
- Benchmarking, Performance and Functional testing
- Feature and performance comparison with similar products

4. Technology Used

- C,C++,Java
- Proprietary tools and frameworks

5. Supported Platforms

- Symbian
- Android
- Bada
- SHP
- S40/S60
- Java/J2ME
- iOS
- Blackberry etc

Testing of Apple and Android based Mobile Apps

BACKGROUND

- **Time Inc., a Time Warner company**, is one of the largest content companies in the world.
- Since April 2010, Customer is developing a commerce gateway for the user management services for their upcoming mobile and existing web interfaces; Along with this they want to launch a couple of mobile APPs in the Apple IOS and Google Android platform.
- MindTree team had done a commendable job during the earlier ecommerce project and they wanted to leverage our e-commerce expertise in to the CGI and Mobil APP testing

SOLUTION

- MindTree ramped up the offshore team that was part of the e-commerce application testing for testing of mobile applications with the help of Mobile Application Testing SME
- The team learnt the apps (Time, People, Life Wall Paper, Sports Illustrated, Real Simple) in no time, evaluated the best tools to be used to set up the environment at offshore (iPhone, iPad, Android & Blackberry emulators, Device Anywhere) and hooked to customer system.
- The team also created new templates for test cases, wrote test cases and finally executed the test cases within the committed schedule.
- Team Size - 5, No of Test Cases - 3000+, Project Duration - Apr 2010 till date

CHALLENGES

- CGI and Mobile APP was an alien world for the e-com team, totally different from what they have done during the e-commerce testing .
- As UI wireframes were keep on changing for iPhone/iPad and Android platforms and there was lot of re- design& re work of test cases involved and we need to follow up for confirmation of changes
- There were build issues while executing on the simulators and also dependencies on TringApps for the Certification builds to make it work for simulators/Emulators we test out at offshore.

BENEFITS TO CUSTOMER

- The Application was launched on time and with excellent quality. The People Android APP was one of the featured APPS in the Android market with a user experience survey rating of 5 out of 5 (excellent).
- In spite of communication challenges and lack of clarity on the requirements, MindTree team is able to coordinate with third party vendors like TringApps who work in a different Time Zone and are able to deliver the applications on time.
