

ConnectM Fleet Tracking System

ConnectM
a Sasken and IDG Ventures company

About ConnectM

ConnectM (a Sasken and IDG Venture company) is a leading solution provider in the Remote Asset Monitoring Space. We offer solution that makes a significant, sustained and measurable business impact. Currently we monitor and control more than 50 thousand assets spread across India and Africa.

Our solutions are robust and are widely being used in different verticals like Transportation, Telecom, Manufacturing, Construction, Buildings and Utilities. All our solutions are powered by ConnectM's innovative M2M platform.

We are the winner of Logica's India Innovation Partner award and IBM Smart Camp for innovative start-ups

Solution Details

ConnectM Fleet Tracking System will capture real-time the vehicle information using GPS (Global Positioning system) and transmit it over GSM/GPRS network to ConnectM's Cloud Server. Data will be stored on ConnectM server and users can log in to access real-time data and alerts.

We have readymade platform solution and eco-system to develop end-to-end solutions for monitoring and analytics of your fleet. This will enable you to track & monitor your fleet at real time basis, on cloud. In case you want to monitor temperature, location, fuel level and get alerts for pre-set condition, you can do this by using our cloud based fleet solution.

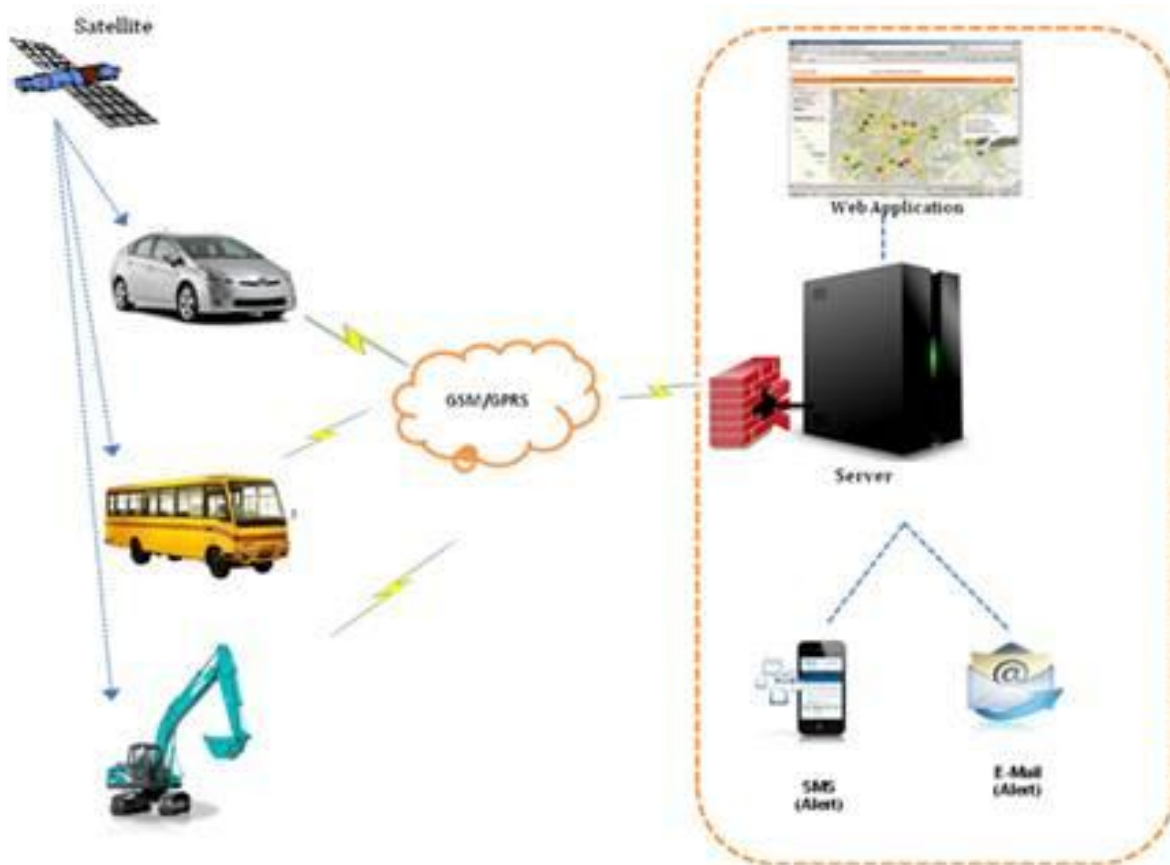

This solution shall help you streamline your processes in terms of managing & tracking your fleet.

Our solution offers features like:

- Real-time tracking of fleet location, speed, odometer reading, alerts/warnings.
- Immobilizing the engine remotely based on preset conditions.
- Track the route travelled by each fleet with details on speed and time. Maintain historical data of fleet travel route, speed & approximate distance travelled.
- Alert notification via sms/email when fleet enters /exits a pre-defined zone (geo fence), over-speeding, fleet waiting in unspecified location for long time through configurable rule engine.
- Alert notifications incase of onboard device tampering / device failure based on diagnostics capability.
- Configurable parameters on access rights for each user, sms /email recipients, escalation matrix, role and privilege management for individual application user.

Alerts will also be sent via SMS and emails to specific numbers and email ID's

Solution Architecture

** Customizable reports for specific needs based on data availability.*
